

# WTL Shield: SOC as a Service

## Protection when you need it

### A 24x7x365 MSSP Model

Brings expert capabilities, experience and technical knowledge delivered as an outsourced Managed Security Service Provider (MSSP) for businesses of all sizes.

#### Why SOCS and why now?

For most organisations, security is a time consuming and expensive necessity, distracting from the core business mission. Developing comprehensive in-house IT security poses a challenging and expensive proposition.

A Security Operations Centre (SOC) allows organisational information systems and data to be monitored, assessed and defended by expert cyber professionals. Business data remains within the business environment.

By outsourcing critical cyber security requirements, organisations can achieve significant operational, financial and compliance benefits.

Common organisational concerns:

- Threats not responded to in a timely, consistent manner
- Lack of coordinated operational and technical approach to prevention, detection and remediation
- Sourcing the appropriate skills to defend against and respond to security attacks
- Lacking accurate incident and threat status

#### Why Outsource?

Technology alone cannot solve all security problems. Case after case emphasises human factors as both the weakest link and most important component of a holistic security framework.

The outsourced partnership model delivers a number of key operational benefits, including:

- ★ Access - Security expertise, research and threat intelligence
- ★ Improve - Threat detection and response time capabilities
- ★ Save – CapEx and OpEx by outsourcing critical security functions
- ★ Monitor - Cyber security alerts and reporting protocol
- ★ Benefit - From established proven policies and procedures to enhance organisational security maturity

#### Next Steps

Do not wait for a security breach. Contact our experts today and take a pro-active approach to defending your organisation.

## Shield Options

We provide two broad categories of SOC service:

#### SHIELD Full Cover

- Businesses have the opportunity to leverage CyberQ owned and operated SOC's, developed around our proprietary ATHENA Cyber Platform network monitoring appliance
- 24/7/365 network monitoring, assessment and defence provided by specialist cyber professionals
- Ideal for clients not requiring their own managed SOC/MSSP benefits

#### SHIELD Build

- Designed for larger/enterprise clients requiring their own in-house SOC functions
- Provides a customised programme of consultancy services to assist in all/some of the adjacent broad stages of SOC development

#### Why Us?

We thrive on collaboration as we believe we all need mutual help and inspiration in our continual striving for cyber resilience.

Our people are highly experienced and certified consultants with international experience and proven track records.

Innovation and value are key to all our services. We are always seeking to deliver what enables more and more organisations around the world achieve a higher level of security maturity and capability.

Established over 30 years ago, WTL has been offering clients a broad range of solutions and services delivered on-premises and via managed services to meet their business transformation, performance and efficiency goals.

Partnering with the award-winning Cyber innovator and successful cyber security specialist, CyberQ Group, WTL offer a set of complementary security solutions including; continuous breach detection to provide real time threat intelligence and monitoring, penetration testing to help customers identify weak spots or vulnerabilities, and security operation centre as a service (SOCaaS), a managed security service which identifies and neutralises cyber threat.
