Future-proof your business
with the proven VMware-based
cloud platform

IaaS

Infrastructure
as a Service

Get streamlined performance no matter where you are in your cloud journey

Whether you're just beginning your digital transformation or you've already migrated workloads to the cloud, you and your team likely have questions about complexity, compliance and even the cost of cloud adoption. How can your business overcome these challenges? Migrating to the cloud can revolutionise your IT and infrastructure if your organisation relies on a cloud platform that can deliver simplicity, security and straightforward pricing.

WTL provides proven Infrastructure as a Service (IaaS) — built on familiar VMware-based technology. Cloud migration is seamless because you don't need to refactor or re-architect your workloads.

We are also dedicated to exceeding your cloud expectations. Our simplified pricing is straightforward and includes storage, compute, network and other associated costs, to make it easy to predict monthly cloud charges.

Key Benefits:

VMware-based technology infrastructure.

Award-winning Cloud Console for unified management.

Centralised monitoring, reporting, and billing.

Multi-layered, built-in security

Geographic and industry-specific compliance.

Complete backup protection of your mission-critical workloads

24x7x365 support

Comprehensive Planning Onboarding and Support

Migrating to the cloud without disruption may be a challenge, since many companies do not have in-house resources, time, or the experience necessary to seamlessly move workloads offsite. WTL experts can help simplify your cloud journey with a comprehensive migration plan designed specifically for your organisation. We'll work together on a strategy that addresses application resource planning and sizing, cloud migration, training, documentation and ongoing account management.

Integrated Management

The Cloud Console delivers an integrated experience. Centrally manage your IaaS environments as well as Cloud Backup, Disaster Recovery as a Service and other WTL solutions. From the console, you can manage your integrated services, view billing and oversee reporting and many other features. We also provides API and SDK extensibility so you can build your own applications and services as needed.

Global Footprint

WTL has data center partnerships around the world that are designed to meet the highest standards for security, compliance and performance. We offer a 100 percent availability service-level agreement (SLA) in each of our cloud regions in North America, EMEA, and APAC.
